Note. These numbers do not represent actual cases in persons with a diagnosis of AIDS. Rather, these numbers are point estimates of cases diagnosed that have been adjusted for reporting delays. The estimates have not been adjusted for incomplete reporting. Data exclude cases from the U.S dependencies, possessions, and associated nations, as well as cases in persons whose state or area of residence is unknown, because of the lack of census information by race and age categories for these areas.

^a Includes 108 persons of unknown or multiple race. Because column totals were calculated independently of the values for the subpopulations, the values in each column may not sum to the column total.
